Draw one or more horizontal or vertical lines from each numbered square. Lines cannot cross each other, other squares, or intersect. Each empty square has only one line. Each numbered square indicates how many squares are connected to it by its lines (the numbered squares are not counted)

Battleships

The object of Battleships is to find the locations of 10 ships (shown to the right) hidden in the above ocean. The ships may be oriented either horizontally or vertically in the grid, but no two ships will occupy adjacent grid squares, even diagonally. The digits along the side of and below the grid indicate the number of grid squares in the corresponding rows and columns occupied by vessels.
