

CSCI 150 Lab Code of Conduct

Fall 2019, Thursday Lab

Respect

- Learn each others' names!
- Don't invade personal space. No keyboard snatching. No erasing code without permission. No inappropriate language directed at someone else.
- Don't be an ass.

Communication

- Be mature about conflict. Explain advice or critiques in a respectful but direct manner, and be willing to accept constructive criticism.
- Listen, don't just hear. Pay attention when your partner is speaking and don't interrupt.

Work

- Be prepared, on time, engaged and focused.
- Have a growth mindset.
- Help each other and work together; make sure you share the work equally and give your partner a chance to contribute.
- Ask for help if you're struggling.

Openness

- People are different! Don't make assumptions. Value your partner's differences and strengths, and acknowledge your own blind spots.
- Be patient.
- Be willing to experiment and explore different ideas or solutions.
- Remember that prior knowledge does not indicate learning potential.
- Remember that you're here to learn, not show off.
